POOJA R

Software Engineer | React.js | TypeScript | JavaScript

pooja.ramesh331@gmail.com | pooja-r.vercel.app/ | linkedin.com/in/pooja--r | github.com/PoojaRamesh3

PROFESSIONAL SUMMARY

Frontend Engineer with 6 years of experience delivering production web applications using React.js, TypeScript, and JavaScript. Experienced in shaping frontend implementation for complex, workflow-driven products: translating requirements into reusable component patterns, managing shared and asynchronous UI state, integrating APIs, and building interactive authoring tools. Focused on maintainable architecture, predictable user interactions, responsive design, accessibility-aware implementation, and performance troubleshooting. Partners with product, design, and backend teams to evaluate implementation trade-offs and deliver reliable features.

TECHNICAL SKILLS

Frontend Engineering: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design, Tailwind CSS, Bootstrap
Architecture & State: Reusable component architecture, component composition, Redux, asynchronous UI state, React Router, i18next
Accessibility: Semantic HTML, keyboard-operable interactions, visible focus states, accessible labels and form feedback, WCAG-aware development
APIs & Integration: RESTful API integration, Axios, loading and error states, client-side validation
Performance & Quality: Memoization, lazy loading, code splitting, render optimization, Chrome DevTools, Lighthouse
Engineering Practices: Technical collaboration, code reviews, Git/GitHub, Agile/Scrum, debugging, maintainability

PROFESSIONAL EXPERIENCE

Software Engineer | Aug 2024 – Present

Excelsoft Technologies Ltd — Mysore, India

- Own frontend implementation of complex product workflows using React.js and TypeScript, working across Redux, React Router, Axios, i18next, and shared UI components.
- Translate product requirements into component boundaries, reusable UI patterns, and state flows; make implementation choices that keep interactions consistent across related modules.
- Build and maintain data-driven components and shared UI patterns, reducing one-off implementations and making common behavior easier to maintain.
- Structure asynchronous UI behavior for API-backed workflows, including loading, validation, error handling, and action states, so users receive consistent feedback.
- Designed and implemented an interactive Hotspot Editor supporting image/background selection, drag-to-create hotspots, zoom controls, coordinate-aware positioning, scoring, and correct-answer visualization.
- Handled coordinate and interaction consistency during zoom and editing by using state-driven positioning logic for hotspot and response regions.
- Implemented a multi-role Author–Reviewer–Approver–Publisher workflow, including role-based actions, permissions, draft/submit/reject/send-back/publish flows, comments, validations, and status visualization.
- Applied accessibility-aware UI practices to interactive controls and forms, including semantic structure, keyboard operability, visible focus treatment, and clear labels and validation feedback where applicable.
- Collaborate with product, design, and backend engineers to clarify requirements, resolve integration issues, review trade-offs, and deliver production-ready features.
- Contribute to code reviews and frontend quality practices, with attention to reusable solutions, readable code, and predictable behavior.

Associate Software Engineer | Jan 2022 – Jul 2024

Excelsoft Technologies Ltd — Mysore, India

- Developed reusable UI components and shared frontend logic for product modules, helping maintain consistent interaction patterns.
- Implemented responsive interfaces and keyboard-friendly interactions, applying accessibility-conscious markup and control behavior.
- Integrated REST APIs with backend teams and implemented client-side loading, validation, and error-handling flows.
- Delivered product enhancements through Agile sprints, debugging issues and refining existing UI behavior.

Web Developer | Nov 2020 – Jan 2022

Inboundsys Webgalaxy Pvt Ltd — Mysore, India

- Developed and deployed responsive websites using HTML, CSS, JavaScript, and HubSpot, translating design mockups into production pages.
- Checked layouts across browsers and device sizes, debugging styling and interaction issues before and after release.

SELECTED PROJECTS

SARAS — Assessment & Component Platform

- Built reusable interface components, including inputs, dropdowns, tables, and modals, to support consistent experiences across product modules.
- Used code splitting and lazy loading to improve how application code is loaded and reduce unnecessary upfront loading.
- Investigated rendering and loading bottlenecks with Chrome DevTools and Lighthouse, then applied targeted frontend optimizations.

SVKM — Question Builder System

- Implemented recursive React rendering for hierarchical question structures with multiple levels of nesting.
- Built dynamic sequencing logic (for example, 1, 1.a, 1.a.I) to generate numbering across nested groups.
- Managed asynchronous UI state and real-time validation across deeply nested forms.
- Used memoization and more efficient state updates to avoid unnecessary rendering in complex form flows.

EDUCATION

B.E. in Computer Science and Engineering — ATME College of Engineering, Mysore | Aug 2016 – Aug 2020
